Group 217 - Food Merge

Game Overview

One player will be provided ingredients to combine into different foods through “merging”. As the story progresses, more ingredients will be unlocked, allowing for a wider scope of mergeable foods. As you play, sell extra inventory to make some money. The game will end when the final food item is merged, by combining a series of merged items.

The player will start with 500 coins. The player will be able purchase ingredients only if they fit into their inventory and their budget. In the first level of the game only certain ingredients and recipes will be available. The end goal is to reach the final item with as many coins as possible (be the most efficient in merging).

Purpose of Each File

Food_merge.py

This program is a terminal-based strategy game centered on resource management and item merging.

Hints.txt

Provides hints to be passed to the player during the game. During each round of the game, players get a choice whether to buy, merge, sell, quit, or receive a hint. The hint they receive will guide them in the directions of their ultimate goal, creating a feast.

Instructions

How to Run the Program

For Windows Users:

1. Install Python: Ensure you have the latest version of Python installed.
2. Open Terminal
3. Locate and navigate to the Folder with food_merge.py
4. Run the script: Type the following and hit Enter
